SITUATION SUMMARY

California Department of Public Health Zika Virus Disease Update

The Medical and Health Coordination Center (MHCC) continues to be activated in response to the Zika Virus Disease (Zika) in order to aggregate and update information from a variety of sources and coordinate response activities across the California Department of Public Health (CDPH).

- CDPH centers and programs are providing information related to their specific activities on a weekly basis. This information is being collected and included in a weekly Public Health and Medical Emergency Function (EF) 08 Situation Report released by the MHCC. The MHCC is managing requests for information from the public, healthcare facilities, and Local Health Departments (LHDs) to ensure responses are timely and accurate.
- Zika is transmitted to people primarily through the bite of an infected *Aedes aegypti* mosquito (also known as yellow fever mosquitoes) and *Aedes albopictus* mosquito (also known as Asian tiger mosquitoes), which are not native to California. Today, 54 countries have documented Zika virus transmission, with over 40 reporting their first outbreak within recent months. The most common symptoms of Zika virus are fever, rash, joint pain, and conjunctivitis. People do not consistently get sick enough to seek treatment at a hospital, and the mortality rate for Zika is extremely low. For this reason, many people might not realize they have been infected. However, Zika virus infection during pregnancy can cause a serious birth defect called microcephaly, a condition where a baby's head is much smaller than normal, as well as other severe fetal brain defects.
- The Centers for Disease Control and Prevention (CDC), CDPH, Emergency Medical Services Authority (EMSA), California Governor's Office of Emergency Services (Cal OES), and State level EF 08 partners are preparing for the management of Zika cases in California. Reporting of select notifiable diseases is mandated by State law in California through Title 17 California Code of Regulations and Zika virus is now classified as a notifiable disease that must be reported. CDPH is working with the healthcare community and local health jurisdictions to identify potential suspect cases and avoid spreading of the disease. New and updated guidelines released by CDC are posted on the CDPH website available at: (<http://www.cdph.ca.gov/HealthInfo/discond/Pages/Zika.aspx>).
- CDC has established a national US Zika Pregnancy Registry to address questions about Zika-associated birth defects and other pregnancy outcomes. All data reported to the U.S. Zika Pregnancy Registry will be de-identified and healthcare provider participation is voluntary. CDPH is participating in the U.S. Zika Pregnancy Registry and is the point of contact for California data submission to CDC. CDPH is working with local health departments and healthcare providers to complete the U.S. Zika Pregnancy Registry data collection forms for submission to CDC.
- EMSA and the EMSA Duty Officer Program are monitoring the situation and remain in communication with the Regional Disaster Medical and Health Coordination (RDMHC) and Medical Health Operational Area Coordination (MHOAC) Programs throughout California.
- Please see attached for full report.

Weather of Concern

- A Red Flag Warning is in effect from 08/24/16 at 2300 hours to 08/25/16 at 2300 hours for portions of Del Norte, Humboldt, and Siskiyou Counties.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

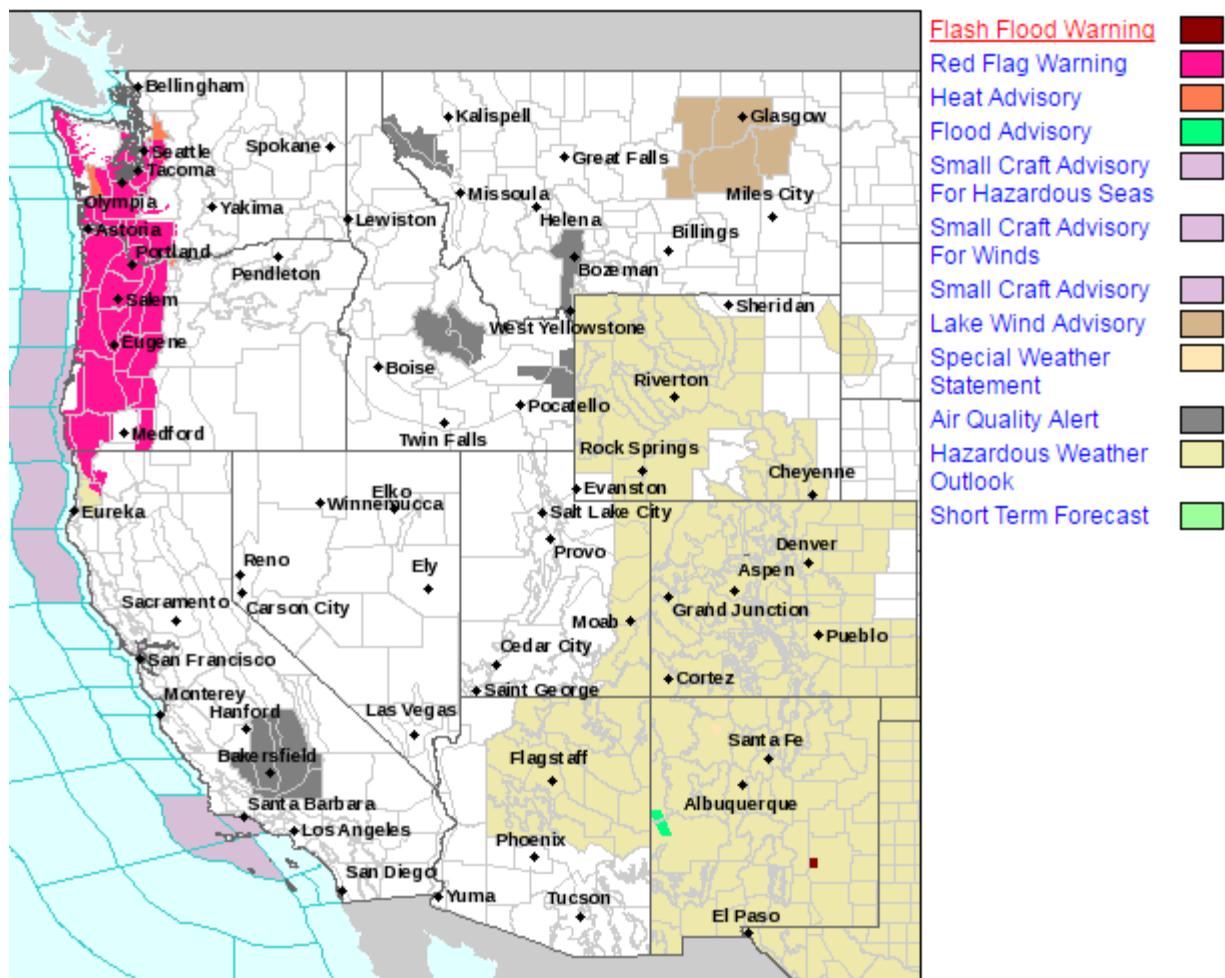

A weak low pressure trough will be over the region through Friday. Warm and dry conditions will prevail. Temperatures will be 2-5 degrees above normal and humidity will drop to 7-17% in inland areas. Poor overnight relative humidity (RH) recovery will be common on mid and upper slopes. The north coast will also be dry with light offshore winds during nights and mornings and poor overnight RH recovery, while a deeper marine layer and onshore flow keeps coastal areas from Mendocino County south cool and humid. On Saturday the weak trough will move east, but little change is expected in weather conditions. A deeper low pressure trough to our north and west beginning Sunday will cause increasing southwest flow over the region, and south to west winds gusting to 25-30 mph will combine with low RH to increase fire potential a bit in eastern areas. A deeper marine layer will move farther inland, and the north coast will benefit from the cool humid air, as well. At this time it looks like this trough will move inland across the region next Wednesday with dry and windy conditions.

SOUTHERN CALIFORNIA

A weak trough moving to our north will produce mild temperatures for this time of year and breezy conditions in a few locations. Early this morning, north winds of 15-30 mph have developed in southern Santa Barbara County and the I-5 Corridor. Expect these winds to slowly decrease during the late morning or early afternoon. Elsewhere, expect sunny skies with temperatures close to seasonal averages. Highs will range from the 70s at the coast to the upper 80s to lower 90s in the valleys to 108 in the low desert. Local sea breezes of 10-20 mph can be expected during the afternoon. Late tonight into Thursday morning, north winds of 15-25 mph will develop in the same areas of Santa Barbara and northern Los Angeles County. Onshore pressure gradients will become stronger Thursday and Friday and west winds of 15-25 mph with gusts to 40 mph can be expected in the Antelope Valley, Banning Pass and nearby areas of the southern Sierra and Angeles National Forest. Temperatures will be slightly cooler Thursday through Saturday with high temperatures averaging a few degrees below normal the remainder of the week. Minimum relative humidity (RH) will likely drop into the teens over most areas away from the coast, but light winds and clear skies should allow for decent recovery the next few nights. Long range models indicate much hotter weather will return next Sunday and Monday. Highs will likely be back over 100 in the valleys by the first part of next week with single digit RH at lower elevations. No thunderstorms are expected during the next 7-10 days.
